

SOLUTION

The BFS algorithm uses a **queue** to keep track of the vertices that need to be visited.

Steps:

1. Start from the source vertex.
2. Mark it as visited.
3. Insert it into the queue.
4. Remove a vertex from the queue.
5. Visit all its unvisited neighboring vertices.
6. Mark each neighbor as visited and add it to the queue.
7. Repeat until the queue becomes empty.
